FOREWORD.

The circular letter issued to divisions by the adjutant general, dated August 27, 1918, covers the general points that are pertinent to the development and training of all the new divisions and allow division commanders discretion as to schedules and programs.

The ultimate efficiency of a division is determined solely by the actual demonstration of its ability to maneuver and fight and not by the number of hours it has devoted to any particular drill.

The programs and schedules contained herein are furnished commanders to assist them in the instruction of their command.

Training Circular No. 24

In connection with this instruction, the engineer regiment will be directed to give such assistance, as may be deemed necessary.

SAPPERS' SECTION.

The sappers' section of the sappers' and bombers' platoon will take the course in field fortifications and demolitions with the pioneer platoon of the headquarters company. At all other times they will work with the bombers' platoon, headquarters company, in the subjects prescribed for that section.

In connection with this instruction the division commander will direct the engineer regiment to render such assistance as is deemed necessary.

PIONEER PLATOON.

The primary function of the pioneer platoon of headquarters company is the construction of battalion and regimental command and observation posts, together with the associated shelters. Thereafter they will be used for the construction and repair of trenches and saps, including revetting and shelters, wire entanglements, minor repairs to roads, trails and trench walks within the regimental area.

In addition to this pioneer work this platoon must be well trained in infantry combat so that in an emergency its 54 rifles may be used.

TRAINS AND MILITARY POLICE.

1. The general principles governing the training of divisional personnel will apply to the personnel and units of the division trains. March discipline will be rigidly enforced so that single vehicles, as well as trains, whether halted or moving, shall leave the road open for troops or vehicles trying to pass. The importance of road space must be understood. Advantage will be taken of every opportunity to train units in road discipline.

2. The proper and orderly loading of trucks and wagons will be insisted upon. The spare parts and implements which form a part of the equipment of vehicles will be carried at all times. Unauthorized articles of personal belongings will not be loaded on wagons, nor will such wagons be loaded with soldiers who are not authorized to ride.

3. In wagon trains, drivers will be required to pay attention to the working of their teams. Loose and slouchy driving will not be tolerated.

The care of vehicles, harness and animals is important. Instruction will be given in methods therefor.

4. In hauling supplies, while in training areas, the many opportunities for assembling trucks or wagons into trains will be used to improve the march discipline of the companies. In these cases, officers and train masters will be required to perform their duties in strict accordance with the regulations.

5. Division ammunition trains, if attached to artillery brigades in separate training areas, will be similarly instructed, under the supervision of the artillery commander.

6. All personnel will be instructed in:

The school of the soldier.

Small arms practice.

Defense against gas.

First aid to the injured.

Personal hygiene.

Care of arms, clothing and equipment.
